

Innovation, Investigation , Development, Technology, Clustering, Competitiveness ; six edges of a bucket dimensional required by the society.

RELAIS,(RED LATINOAMERICANA DE LA INDUSTRIA DEL SOFTWARE) an answer today for a future problem that is growing day by day.

All businesses are software's businesses. Day to day we experienced how technology deploy on all sectors of the economy and affects transversally and directly the productivity, from education, health, security, government administration, financial systems, trade, agriculture, tourism, education, All sectors require of the extensive use of systems, in order to be able of realize an efficient work. The quality of the products and services that offers an economy will depend of the quality of the systems used to execute them, the question is who builds these systems? Who maintains them?

In a very high proportion is do it by PYMES of our nations, that require support to attain the competitiveness and not being absorbed by multinationals.

The abysmal differences of efficiency, between those who use them properly and those who does not, generate an impossible competitive advantages to skew, if they do not have the necessary infrastructure. So as urgent as is to build roads , hospitals, schools, bridges, tunnels, and dams, is to have today systems to administer assets and to give service.

Governments owe to have robust systems to execute its function, from taxes, civil register, integration of information between countries for security, efficiency on public services, the impact that the systems can give today and the one who can give in the future scored the difference between our societies.

We have to prepare the resource and the capabilities so we can build the systems of the future. RELAIS Is a very important effort for increase a spirit of integration and a regional growth that allows support the strength of TIC pymes that impact in all the productive machinery of his area of influence.

The integration of our region and the impulse to close the digital gap that today has convert in the ancient illiteracy, where the access to the knowledge of the correct use of the technology is the commitment so that the society grow in balance.
